A considerable portion of the waste generated in the pharmaceutical industry is categorized as hazardous and must be handled with caution. We ensure that the waste generated by our operations is effectively monitored and disposed of in accordance with all relevant regulatory standards.

We also regularly monitor our waste management systems and procedures to ensure that the waste generated throughout our sites undergoes proper and safe treatment. Solvent recovery systems deployed at our API locations allow predefined volumes of used solvent to be recovered. Our operational efficiency allows us to use resources conservatively and reduce waste. We comply with all the local and national regulations, in addition to adopting global standards in safe handling and disposal of emissions and effluents.

10. Health and safety management system:

Yes, all units are certified with ISO 45001:2018. We carry out internal audits to check the effectiveness of EHSMS periodically. Trained EHSMS coordinators are appointed to implement OHSMS.

b. What are the processes used to identify work-related hazards and assess risks on a routine and non-routine basis by the entity

At Laurus Labs, operational excellence and employee well-being are intrinsically linked. Guided by our foundational Standard Operating Procedures—EHS/004 (Risk Assessment) and EHS/028 (Internal Audits)—we maintain an uncompromising approach to hazard identification. Our "Safety First" mandate is hardwired into our pre-execution workflow through a robust, three-pronged evaluation mechanism comprising Activity-Based Risk Assessments (ABRA), HAZOP studies, and Exposure Risk Assessments (ERA). This ensures that process risks are mitigated to acceptable levels before a single machine is turned on. In addition we also carry out Job Safety Analysis (JSA) for all non-routine activities.

However, best in class safety measures cannot rely on engineering controls alone; it demands a collective organizational mindset. By cascading line management responsibility down to the shop floor, we have institutionalized employee-led safety workflows. Initiatives like our One-Day Safety Officer rotation, dedicated Shift Safety Champions, and weekly Behavior-Based Safety (BBS) conversations encourage open safety dialogue and allow us to address the root causes of unsafe actions collaboratively.

As part of our ongoing safety transformation, we have announced the commencement of SANKALP Phase 2 program our safety culture transformation journey in collaboration with the British Safety Council, a global leader in health and safety excellence.

Supported by a rigorous change control protocol and strengthened by an extensive three-tiered audit system (which includes intra-unit, central, and independent third-party evaluations), we are dedicated to the continuous improvement of our Environment, Health, and Safety Management System (EHSMS) to protect our most valuable asset: our people.

c. Whether you have processes for workers to report the work related hazards and to remove themselves from such risks. (Y/N)

Yes, Our commitment to occupational health and safety is driven by standardized execution and active employee ownership. Operating under SOP EHS/028 (Internal Audit, Inspections, NC, and CAPA) and SOP EHS/007 (EHS Committee), we have created an environment where hazard identification is continuous and institutionalized. Our dedicated EHS department conducts frequent, rigorous rounds across the shop floor, backed up in real-time by trained Shift Safety Champions who monitor critical activities and flag immediate risks during every single shift.

We believe that the best safety insights come directly from the shop floor. Through our Safety Suggestion Scheme, anchored by accessible suggestion boxes at our plant's main gate, workers are actively encouraged to report unsafe observations and propose process enhancements. This ground-level vigilance is amplified during our National Safety Day and World Environment Day promotional campaigns, where the EHS department recognizes and rewards employees who champion safety protocols. By blending rigorous corporate compliance with a rewarding safety culture, we ensure that every worker is an active guardian of our zero-harm workspace.

9. Briefly describe the waste management practices adopted in your establishments. Describe the strategy adopted by your company to reduce usage of hazardous and toxic chemicals in your products and processes and the practices adopted to manage such wastes

In keeping with our focus on sustainable operations, Laurus Labs strives to reduce waste generated at the source whenever possible and recycle the residual waste. A considerable portion of the waste generated in the pharmaceutical industry is categorized as hazardous and must be handled with caution. We ensure that the waste generated by our operations is effectively monitored and disposed of in accordance with all relevant regulatory standards.

We also regularly monitor our waste management systems and procedures to ensure that the waste generated throughout our sites undergoes proper and safe treatment. Solvent recovery systems deployed at our API locations allow predefined volumes of used solvent to be recovered. Our operational efficiency allows us to use resources conservatively and reduce waste. We comply with all the local and national regulations, in addition to adopting global standards in safe handling and disposal of emissions and effluents.

Some of the active measures and interventions to reduce processed waste from our operations are:

- All used batteries are returned to the supplier or recycler. E-waste is collected and delivered to authorized recyclers
- 100% of the hazardous waste produced was disposed safely across all units
- E-waste is being sent to authorized recyclers

This Sustainability Information is included in the Company's Business Responsibility and Sustainability Report (the "BRSR Report") included within the Integrated Annual Report (the "IAR") of the Company for the year ended March 31, 2026. This engagement was conducted by a multidisciplinary team including assurance practitioners, environmental engineers and specialists.

2. Identified Sustainability Information

Our scope of limited assurance consists of the Identified Sustainability Information listed in the Appendix I to our report. The reporting boundary of the BRSR Report is as disclosed in Question 13 of Section A: General Disclosure of the BRSR with exceptions disclosed by way of note under respective questions of the BRSR Report, where applicable.

Our limited assurance engagement was with respect to the year ended March 31, 2026 information only unless otherwise stated and we have not performed any procedures with respect to any other elements included in the BRSR Report and, therefore, do not express any conclusion thereon.

3. Criteria

The Criteria used by the Company to prepare the Identified Sustainability Information is listed below:

- Regulation 34(2)(f) of the Securities and Exchange Board of India (the "SEBI") (Listing Obligations and Disclosure Requirements), Regulations, 2015 as amended; and
- Business Responsibility and Sustainability Reporting Requirements for listed entities per Master Circular No. HO/49/14/14(7)2025-CFD-POD2/I/3762/2026 dated January 30, 2026 (the "SEBI Master Circular").

4. Management's Responsibility

The Company's management is responsible for selecting or establishing suitable criteria for preparing the Sustainability Information including the reporting boundary of the BRSR Report, taking into account applicable laws and regulations, if any, related to reporting on the Sustainability Information, identification of key aspects, engagement with stakeholders, content, preparation and presentation of the Identified Sustainability Information in accordance with the Criteria. This responsibility includes design, implementation and maintenance of internal controls relevant to the preparation of the BRSR Report and the measurement of Identified Sustainability Information, which is free from material misstatement, whether due to fraud or error.

5. Inherent limitations

The absence of a significant body of established practice on which to draw to evaluate and measure non-financial information allows for different, but acceptable, measures and measurement techniques and can affect comparability between companies.

6. Our Independence and Quality Control

We have maintained our independence and confirm that we have met the requirements of the Code of Ethics issued by the Institute of Chartered Accountants of India (the "ICAI") and the SEBI Master Circular and its clarifications thereto and have the required competencies and experience to conduct this assurance engagement.

We apply Standard on Quality Control (the "SQC") 1, "Quality Control for Firms that Perform Audits and Reviews of Historical Financial Information, and Other Assurance and Related Services Engagements", and accordingly maintain a comprehensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards, and applicable legal and regulatory requirements.

7. Our Responsibility

Our responsibility is to express a limited assurance conclusion on the Identified Sustainability Information listed in Appendix I based on the procedures we have performed and evidence we have obtained.

We conducted our engagement in accordance with the Standard on Sustainability Assurance Engagements (SSAE) 3000, "Assurance Engagements on Sustainability Information", and Standard on Assurance Engagements (SAE) 3410 Assurance Engagements on Greenhouse Gas Statements (together the "Standards"), both issued by the Sustainability Reporting Standards Board (the "SRSB") of the ICAI.

These Standards require that we plan and perform our engagement to obtain limited assurance about whether the Identified Sustainability Information is free from material misstatement.

As part of limited assurance engagement in accordance with the Standards, we exercise professional judgment and maintain professional skepticism throughout the engagement.

A limited assurance engagement involves assessing the suitability in the circumstances of the Company's use of the Criteria as the basis for the preparation of the Identified Sustainability Information as listed in Appendix I, assessing the risks of material misstatement of the Identified Sustainability Information whether due to fraud or error, responding to the assessed risks as necessary in the circumstances, and evaluating the overall presentation of the Identified Sustainability Information.

A limited assurance engagement is substantially less in scope than a reasonable assurance engagement in relation to both the risk assessment procedures, including an understanding of internal control, and the procedures performed in response to the assessed risks.

The procedures we performed were based on our professional judgment and included inquiries, observation of processes performed, inspection of documents and evaluating the appropriateness of reporting policies and agreeing with underlying records.

Given the circumstances of the engagement, in performing the procedures listed above, we:

- Obtained an understanding of the Identified Sustainability Information and related disclosures;
- Obtained an understanding of the assessment criteria and their suitability for the evaluation and/or measurements of the Identified Sustainability Information;
- Made inquiries of Company's management, including Environment Health and Safety team, finance team, compliance team, human resources team amongst others and those

with the responsibility for preparation of the BRSR Report;

- Obtained an understanding of the key systems, processes and controls for recording, processing and reporting on the Identified Sustainability Information at the corporate office and at plants on a sample basis. Our procedures did not include evaluating the suitability of design, obtaining evidence about their implementation or testing operating effectiveness of particular control activities;
- Based on the above understanding and the risks that the Identified Sustainability Information may be materially misstated, determined the nature, timing and extent of further procedures;
- Reviewed the key assumptions, emission factors and methodologies used for calculation of Greenhouse Gas (the "GHG") emissions;
- Reviewed the Company's process for collating the sustainability information through agreeing or reconciling the Identified Sustainability Information with the underlying records on a sample basis; and
- Reviewed the consolidation for plants on a sample basis and corporate office under the reporting boundary for ensuring the completeness of data being reported.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our limited assurance conclusion.

8. Exclusions

Our assurance scope excludes the following and therefore we do not express a conclusion on:

- Operations of the Company other than the Boundary mentioned in the Identified Sustainability Information listed in Appendix I;
- Aspects of the Report and the data/information (qualitative or quantitative) other than the Identified Sustainability Information;
- Data and information outside the defined reporting period i.e. the financial year ended March 31, 2026; and
- The statements that describe expression of opinion, belief, aspiration, expectation, aim, or future intentions provided by the Company.

9. Limited Assurance Conclusion

Based on the procedures we have performed and the evidence we have obtained, nothing has come to our attention that causes us to believe that the Identified

Sustainability Information listed in Appendix I and presented for the year ended March 31, 2026 in the BRSR Report are not prepared, in all material respects, in accordance with the Criteria as stated in paragraph 3 above.

10. Restriction on use
